

# **THE ESSENCE OF THE SCOPE –TRU™ TOOL**

US Patent # 8745914

**A single elongate cylindrical precision rod with front and rear indicators**

**The front and rear indicators serve as axial projections of both rings, and how the axis of those rings relates to the axis of the barrel**

**The tool will ultimately reveal any misalignment of the scope ring axis as it relates to the barrel axis**

**Used according to instructions, the tool will also reveal any differences existing between the front and rear scope ring heights.**
